CODE 2

- Printing the multidimensional array for item 2 is a difficult process for me. I do not have the ability to do it with matrix, since I do not know how to do it. I tried to do it manually, but it will not print the way It should. It will not print the numbers, since it needs some while and for-loop that will help print the numbers. Also, determining the spaces seems challenging since some charging stations are different when it comes to printing the spaces from the others.
